LP1: Deliverable number 3.1.1

Deliverable Title: Creation of the laboratory-clean room

Report about creation of the laboratory-clean room

This report summarizes the actions and steps taken for the successful creation of a laboratory space providing GMP (Good Manufacturing Practice) compliance, hence referred to as clean room.

The clean room was built in a 4x6 m room space in the 1st floor of the School of Medicine adjacent to the laboratory of Physiology. For this reason the technical service of our University was used to empty clean and paint the room in order to render it in a suitable state for transformation to a clean room.

After the technical specifications according to the ISO 14644-1 were laid down (see attachment#1) a committee for running the tender and accepting the final product (clean room) was established 8800/2015, 26/01/2015 (attached#2) and a tender was planned and executed 8801/2015, 11/2/2015 (attachment#3).

The committee after reviewing the technical and legal documents of the tender's participants (attached#4) signed the 17942/2015, 16/02/2015 (attached#5) stating the company granted the tender was “Climathermica”, 20 Athinas str., 17455 Alimos, GREECE Tel.: +30 210 9811750, +30 210 9811174 Fax: +30 210 9811651, which was accepted by the research committee 21158/2015, 24/2/2015 (attached#6) and contracted with climathermica 29239/2015 13/3/2015 (attache#7).

After that, the company was established in the room to be transformed and executed the appropriate works which were completed by the 23/6 /2015 and the final product (clean room) was accepted by the tender's committee 87502/2015, 17/7/2015 (attached#8).

As it was requested in the tender the clean room is accompanied by pertinent documentation describing different aspects of its properties and proving GMP compliance (attached#9).

The Project is co-funded by the European Union and by National Funds of the Participating Countries under the IPA Cross-Border Programme “Greece – The former Yugoslav Republic of Macedonia 2007-2013”
